Education

B.Tech Amrita Vishwa Vidyapeetham, Coimbatore – CSE	GPA: 7.43/10.0	Aug 2023 – Jul 2027
Vivekam Matriculation Higher Secondary School – PCMCS	Percentage: 90.83%	Aug 2021 – May 2022

Experience

Web Application Development Intern <i>Pricol Technologies Plant 1</i>	Apr 2026 – Jun 2026
---	---------------------

- Developed a secure enterprise file transfer platform using Laravel and React, enabling controlled document exchange between internal employees, customers, and vendors.
- Implemented role-based access control (RBAC), multi-stage approval workflows, OTP-based authentication, user management modules, and audit-ready transaction tracking.
- Built features including file transfer requests, approval centers, team oversight dashboards, inbox management, and SFTP backed secure file storage with configurable system settings.

Projects

Second Brain | *JavaScript, Gemini API, Obsidian, Slack, GitHub Workflows* [GitHub Repository](#)

- Developed an AI-powered knowledge management system integrating Obsidian notes with Slack for seamless collaboration.
- Leveraged the Gemini API to process, summarize, and retrieve contextual information from personal knowledge bases using natural language interactions.
- Automated note synchronization, memory organization, and workflow execution through GitHub Actions and modular JavaScript workers.

Art Collaboration | *React, Node.js, Express, PostgreSQL, Socket.IO, Supabase* [Frontend](#) [Backend](#) [Deployment](#)

- Built a full-stack real-time collaborative canvas app where multiple users can draw simultaneously using WebSockets via Socket.IO, with room-based isolation ensuring strokes are scoped to individual sessions.
- Implemented JWT-based user authentication with bcryptjs password hashing, protected REST API routes, and a persistent Supabase PostgreSQL backend for storing user accounts and saved artwork states as JSONB.
- Deployed the backend on Render with a self-ping keep-alive mechanism and the React frontend on Vercel, with dynamic shareable room URLs enabling instant multiplayer collaboration via link sharing.

Steam Clone (Game Purchase Platform) | *MERN Stack* [Frontend](#) [Backend](#) [Deployment](#)

- Built a Steam-inspired game purchasing platform using the MERN stack with game browsing, downloads, admin approval workflows, and MongoDB persistence.
- Implemented RBAC, JWT authentication with AES encryption, email-based OTP (2FA), and protected frontend routes.
- Enhanced security using RSA digital signatures, bcrypt hashing, SHA-256 token storage, audit logging, and middleware-based access control.

Areas of Interest

Data Structures & Algorithms | Machine Learning

Campus Roles

- **Lead Full-Stack Developer — Intel IoT Web Developer Club** Leading development of club projects, managing repositories, and mentoring contributors.

Technologies

- **Languages:** Python, Ruby, JavaScript, Java, C, C++, PHP.
- **Frameworks:** Node.js, Express.js, Ruby on Rails, React, Laravel, Flask, FastAPI.
- **Databases:** MongoDB, MySQL, SQLite, PostgreSQL, ChromaDB.
- **Tools:** Git, GitLab, GitHub, Linux, Unreal Engine 5, Blender, Godot, PuTTY, ClickHouse, Docker, Nginx, Cloudflare Workflow APIs, PyTorch, OpenCV, YOLOv8.

Certificates & Badges

- Udemy — Full Stack Web Development Bootcamp (Angela Yu)
- HackerRank — Python, SQL, JavaScript
- AWS Academy Graduate Badge — Cloud Foundations
