📍 Coimbatore, India   ✉ svishnu33@gmail.com   ☎ +91 9488643165   🌐 Portfolio   in LinkedIn   📄 GitHub

## Profile

Computer Science undergraduate with experience in full-stack development and AI-powered applications. Passionate about building scalable software solutions with a strong foundation in modern web technologies and 3D modelling.

## Education

|                                                              |                    |                     |
|--------------------------------------------------------------|--------------------|---------------------|
| <b>B.Tech Amrita Vishwa Vidyapeetham, Coimbatore – CSE</b>   | GPA: 7.43/10.0     | Aug 2023 – Jul 2027 |
| <b>Vivekam Matriculation Higher Secondary School – PCMCS</b> | Percentage: 90.83% | Aug 2021 – May 2022 |

## Experience

|                                                                                 |                     |
|---------------------------------------------------------------------------------|---------------------|
| <b>Web Application Development Intern</b><br><i>Pricol Technologies Plant 1</i> | Apr 2026 – Jun 2026 |
|---------------------------------------------------------------------------------|---------------------|

- Developed a secure enterprise file transfer platform using Laravel and React, enabling controlled document exchange between internal employees, customers, and vendors.
- Implemented role-based access control (RBAC), multi-stage approval workflows, OTP-based authentication, user management modules, and audit-ready transaction tracking.
- Built features including file transfer requests, approval centers, team oversight dashboards, inbox management, and SFTP backed secure file storage with configurable system settings.

## Projects

**ReplayRAG** | *FastAPI, React, Faster-Whisper, ChromaDB, Ollama*   [Frontend](#)   [Backend](#)

- Developed an AI-driven study session recorder that captures screen video and microphone audio in real-time, performing automated timestamp-aligned speech transcription and slide OCR text extraction.
- Built a hybrid vector search RAG pipeline using Sentence-Transformers (bge-small-en-v1.5) and ChromaDB to chunk and index multimodal study content for semantic context retrieval.
- Integrated a local Ollama server running Llama 3.2 to synthesize natural, human-like answers with exact timestamp citations, persisting Q&A history and session metadata via SQLite and SQLAlchemy.

**Second Brain** | *JavaScript, Gemini API, Obsidian, Slack, GitHub Workflows*   [GitHub Repository](#)

- Developed an AI-powered knowledge management system integrating Obsidian notes with Slack for seamless collaboration.
- Leveraged the Gemini API to process, summarize, and retrieve contextual information from personal knowledge bases using natural language interactions.
- Automated note synchronization, memory organization, and workflow execution through GitHub Actions and modular JavaScript workers.

**Art Collaboration** | *React, Node.js, Express, PostgreSQL, Socket.IO, Supabase*   [Frontend](#)   [Backend](#)   [Deployment](#)

- Built a full-stack real-time collaborative canvas app with multi-user drawing via Socket.IO WebSockets, room-based isolation, and JWT authentication with bcryptjs password hashing on protected REST API routes.
- Deployed the backend on Render with a self-ping keep-alive mechanism and frontend on Vercel, using a persistent Supabase PostgreSQL backend for accounts and JSONB artwork state, with shareable room URLs for instant collaboration.

## Certificates & Badges

- Udemy — Full Stack Web Development Bootcamp (Angela Yu)
- HackerRank — Python, SQL, JavaScript
- AWS Academy Graduate Badge — Cloud Foundations

## Campus Roles

- **Lead Full-Stack Developer — Intel IoT Web Developer Club**   Leading development of club projects, managing repositories, and mentoring contributors.

## Technologies

- **Languages:** Python, Ruby, JavaScript, Java, C, C++, PHP.
- **Frameworks:** Node.js, Express.js, Ruby on Rails, React, Laravel, FastAPI.
- **Databases:** MongoDB, MySQL, SQLite, PostgreSQL.
- **Tools:** Git, GitLab, GitHub, Linux, Unreal Engine 5, Blender, Godot, PuTTY, ClickHouse, Docker, Cloudflare Workflow APIs.
